

SOLAR ECLIPSE 2021 DESTINATION ANTARCTICA

The adventure of a lifetime meets the chance of a lifetime

An expedition to Antarctica, South Georgia and the Falklands is an exhilarating adventure of a lifetime. See massive icebergs in Antarctica, the wildlife spectacle of South Georgia's colonies of hundreds of thousands of king penguins, and the vast albatross breeding grounds of the Falklands. Add to that the chance of seeing a once-in-a-lifetime phenomenon—a total solar eclipse.

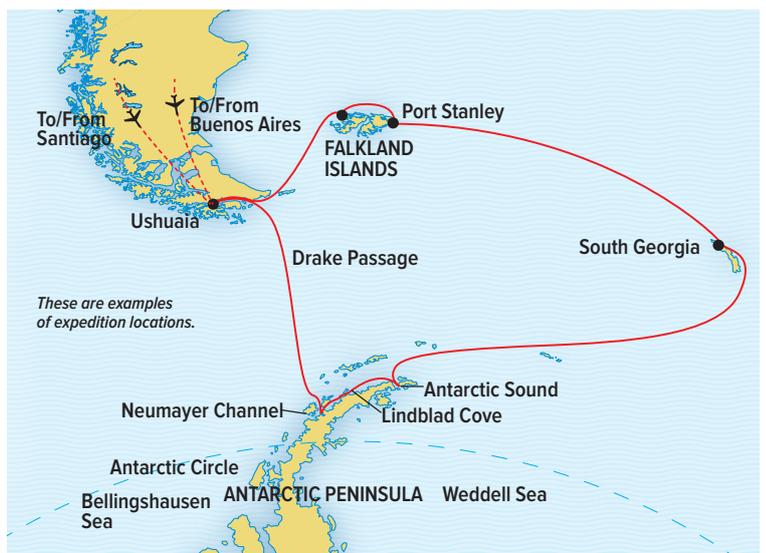

ANTARCTICA, SOUTH GEORGIA & THE FALKLANDS

22 DAYS | DEPARTING NOV. 17 & 18, 2021

On board *National Geographic Endurance*, *National Geographic Explorer* & *National Geographic Orion*

Our three polar expedition ships aim to be positioned in the path of totality during the next total solar eclipse on December 4, 2021. While we will be in the right spot to witness the eclipse, which will last two minutes, the most important factor in viewing an eclipse is weather. Although clear skies are often experienced here, overcast days are just as common. The ships' crews will utilize their state-of-the-art technology aboard to find the best possible viewing area, hoping to find an unobscured view of the sun, but nothing can be guaranteed. And, of course, our naturalist team and guest speakers will provide insight and background on eclipses and other astronomical features one might encounter in the Southern Ocean and Southern Hemisphere.

CAT. 1 FROM \$32,270* | CAT. 7 FROM \$70,650*
